Mixed rank: rank of the equally weighted semantic, lexical and terminology mean ranks. Parentheses show the mixed mean rank; lower ranks are better.
Within each family, metrics have equal weight; terminology first balances all / external / LLM-enriched groups equally. Tied metric scores receive average ranks.
Metric cells: native-scale direction-macro scores. Colors use within-metric model ranks.
Selected current models; metric-specific shared directions, not proven identical rows. All-NA metrics omitted. Descriptive chosen weights, not a significance or human-validity claim.
