Normalized | Zero-Shot vs Few-Shot Violins | JRC Articles | Terminology | original_glm

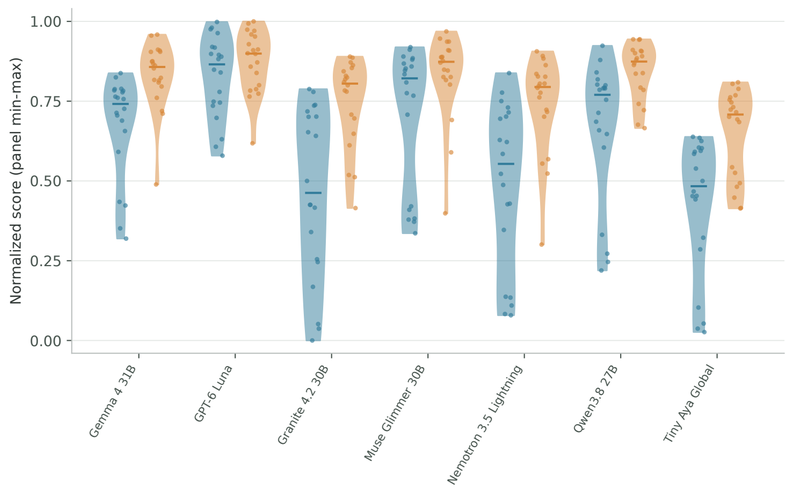

Zero Shot Few Shot

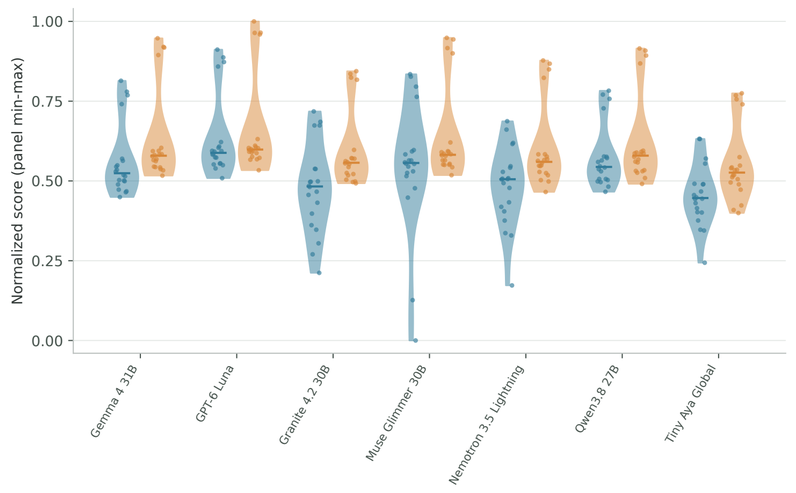

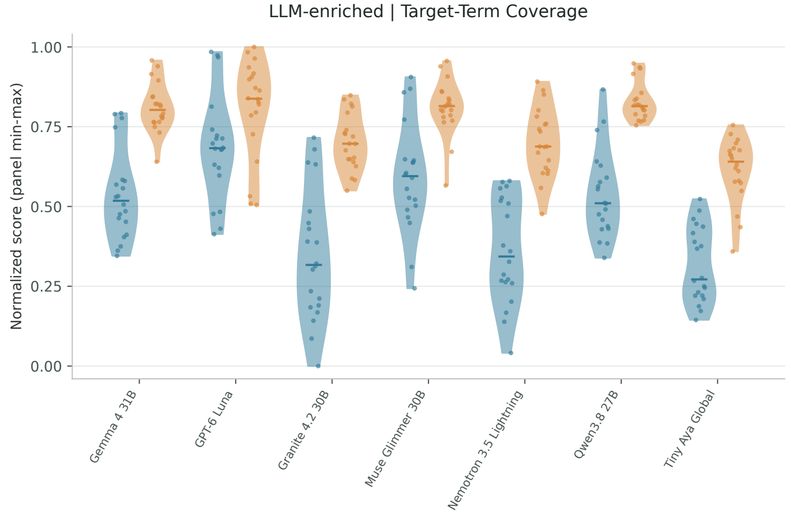

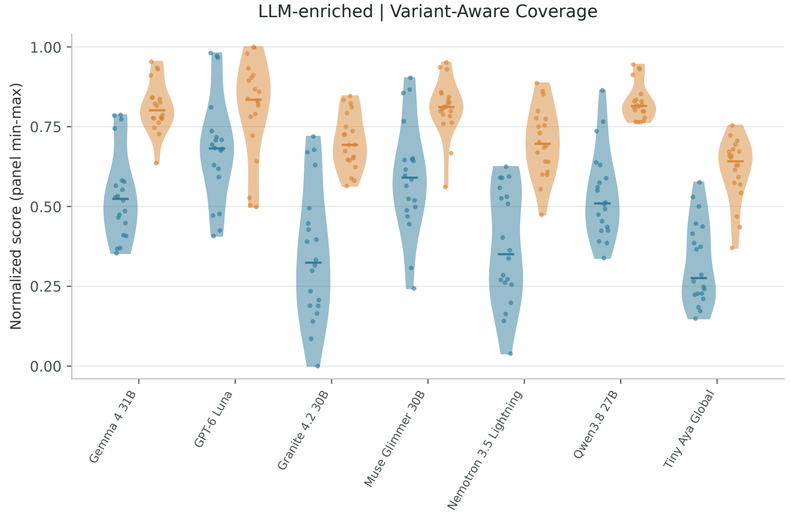

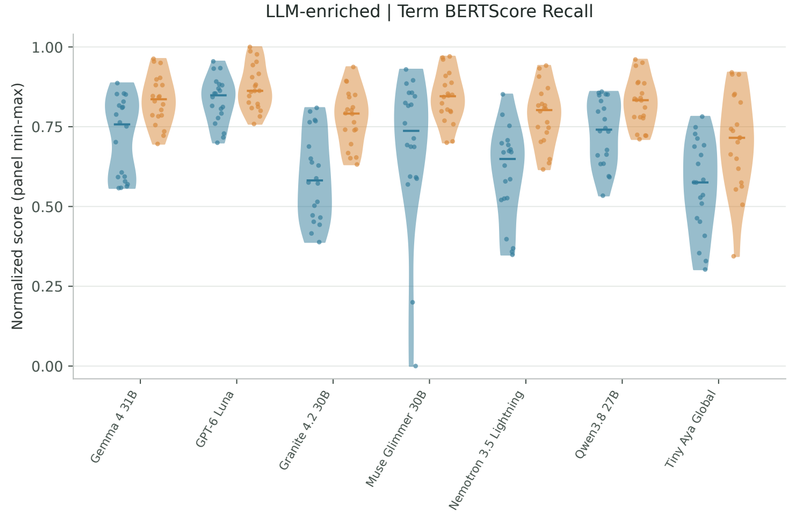

Panel min-max normalization shared across all selected models and both prompts: 0 = observed minimum, 1 = observed maximum, NOT absolute quality.
Constant panels map to 0.5. Dataset/view/term-group panels have separate bounds; normalized magnitudes are not comparable across panels.
One point = one language-direction score, NOT one translation. Identical common directions across models and both prompts per metric.
Violin: Scott-bandwidth KDE; center line: median. Sparse/constant groups use points and median only. No confidence or significance inference.
