Balanced From-Language Rankings | Median Across Models

All three datasets | Zero-shot + Few-shot | Annotation view: original_glm

Mixed rank: rank of the equally weighted semantic, lexical and terminology mean ranks. Parentheses show the mixed mean rank; lower ranks are better.
Within each family, metrics have equal weight; terminology first balances all / external / LLM-enriched groups equally. Tied metric scores receive average ranks.
Cells: median across models of per-model partner-direction means. Overall averages stratum values and family ranks equally, using the complete-coverage language cohort.
Languages ranked; partner sets may differ. Incomplete coverage is excluded, never scored zero. All-NA metrics omitted. Descriptive chosen weights, not a significance or human-validity claim.
