# Metric Correlations | JRC Definitions | luna | Zero Shot

Blocks: general metrics | all terms | externally verified | LLM-enriched (refined). Off-diagonal blocks compare metrics across term groups.
Cells: unchanged coefficients to three decimals. Colors use a shared nonlinear scale to expand differences near +/-1; colorbar ticks are actual correlations.
Each pair uses common directions within each dataset across all models, both prompts and all three term groups for terminology metrics.
Pairwise supports may differ; NA = unavailable or constant. All-NA success-rate metrics are omitted. Descriptive model-level correlations, not per-translation correlations or significance tests.
