Language Performance Across Models | From Zero-Shot vs Few-Shot | Zoomed Native Scores

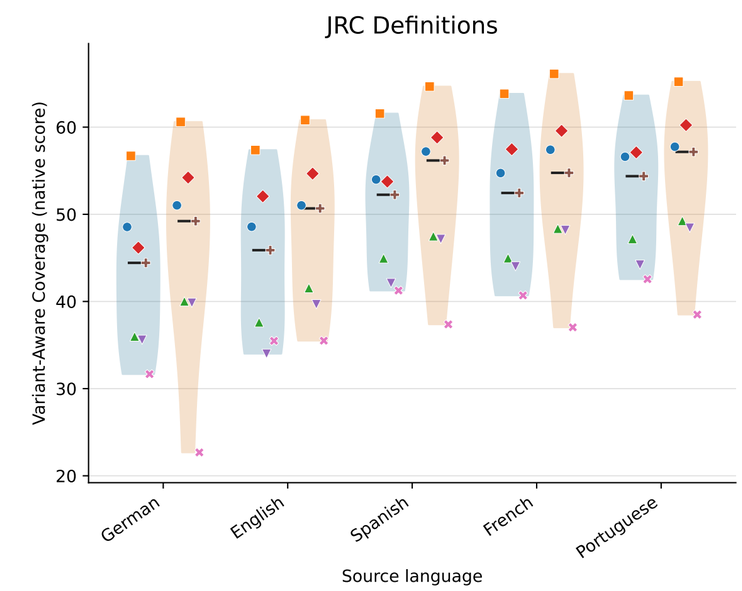

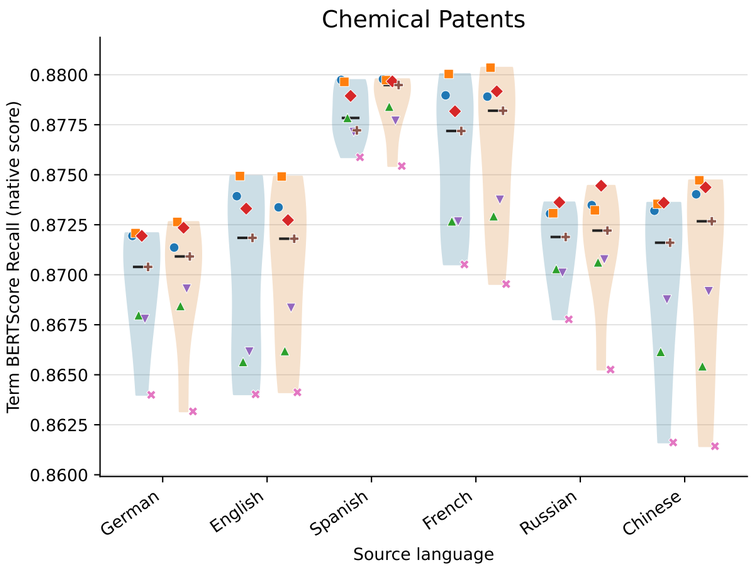

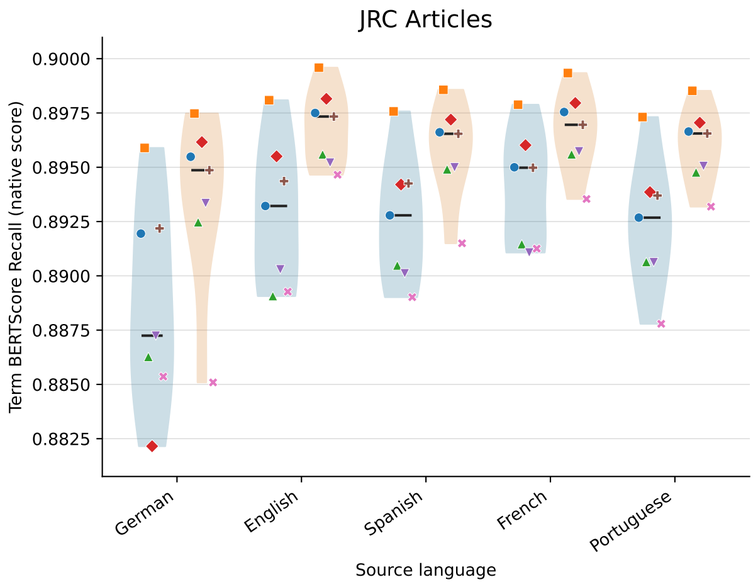

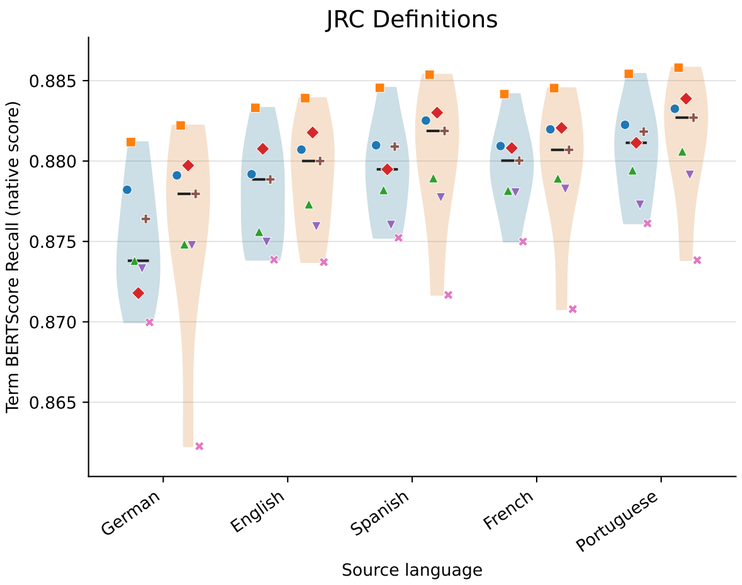

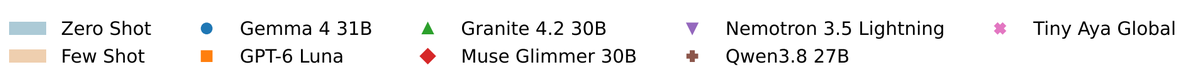

One dot = one model's equally weighted mean over supported partner directions for that language and prompt. Violins summarize model means, not model-pair points.
Both prompts share each panel's zoomed linear native-score axis; panels have independent ranges. No normalization or clipping. General scores are shared; terminology uses Luna LLM-enriched terms.
All models and both prompts are required per retained direction. Partners/support can differ across languages/metrics. NA is unavailable, not zero. Row identities unverified; small dependent cohorts, not significance evidence.
