Zoomed Native Range | Zero-Shot vs Few-Shot Violins | JRC Articles | General metrics

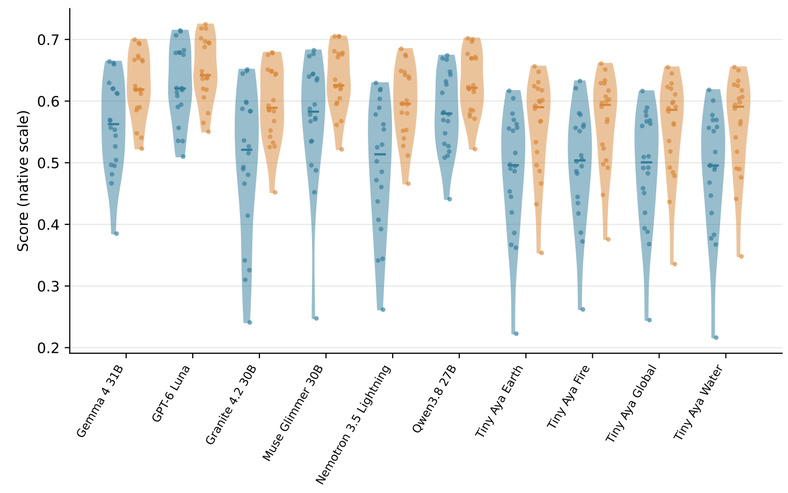

Zero Shot Few Shot

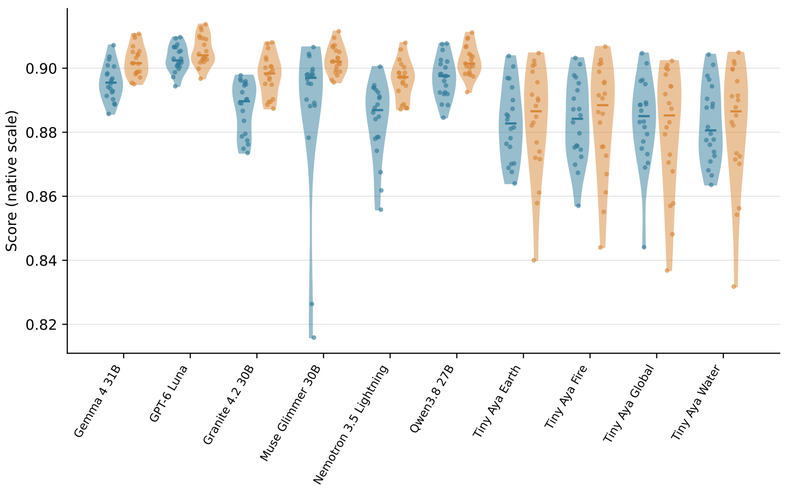

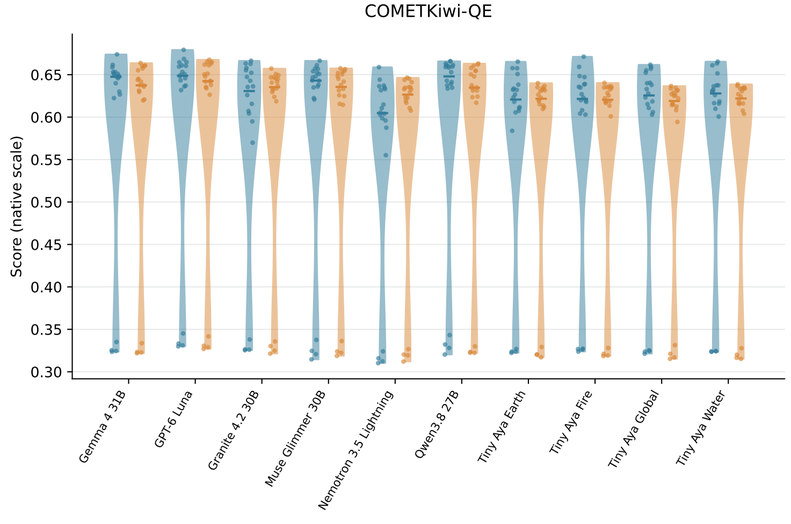

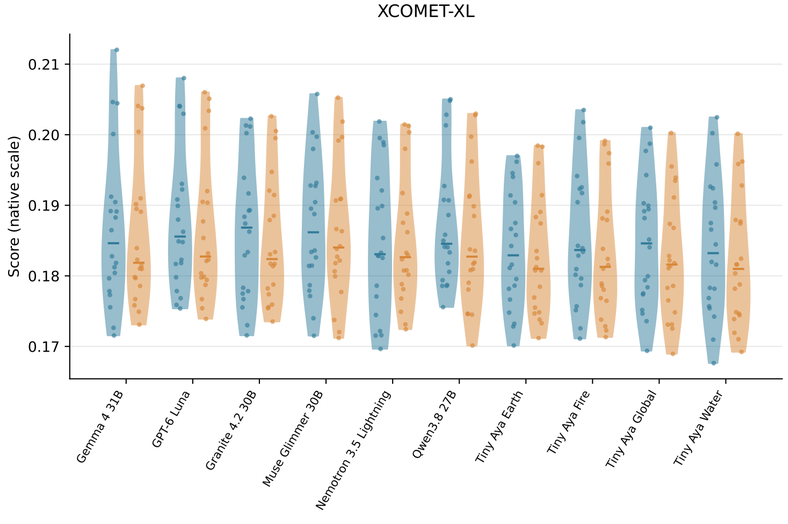

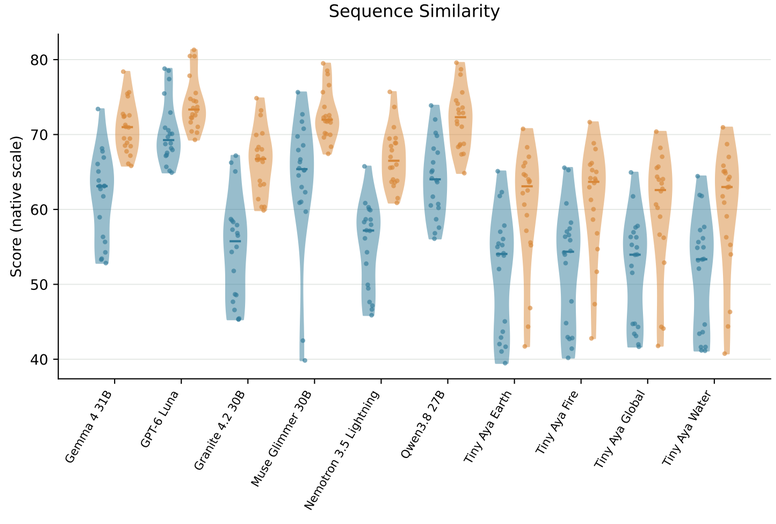

Native scores unchanged; panel axes fit all observed scores with 5% padding. Axes need not start at zero; no observations clipped.
One point = one language-direction score, NOT one translation. Identical common directions across models and both prompts per metric.
Violin: Scott-bandwidth KDE; center line: median. Sparse/constant groups use points and median only. Native scales; no confidence or significance inference.
