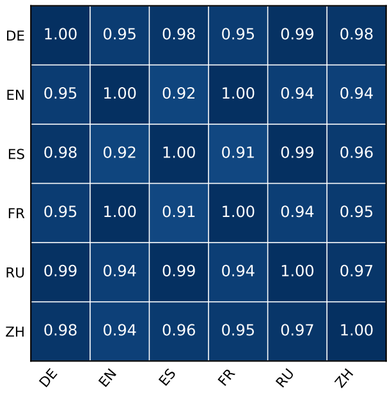
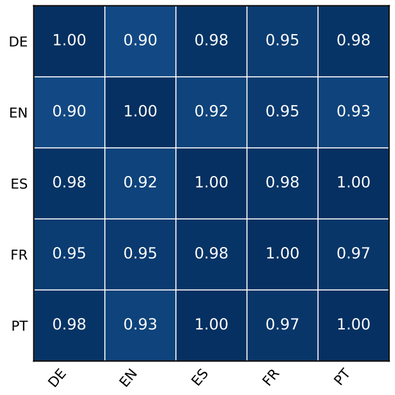
Language-to-Language Correlations | From | Variant-Aware Coverage
Datasets separate | Both prompts averaged equally

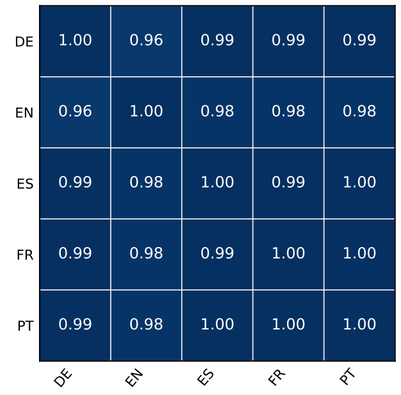
Chemical Patents | Pearson
7 models per correlation

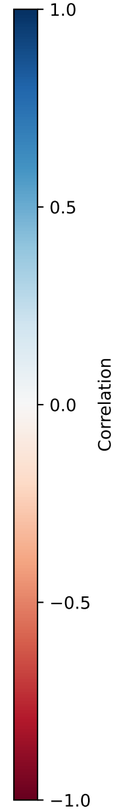


JRC Articles | Pearson
7 models per correlation

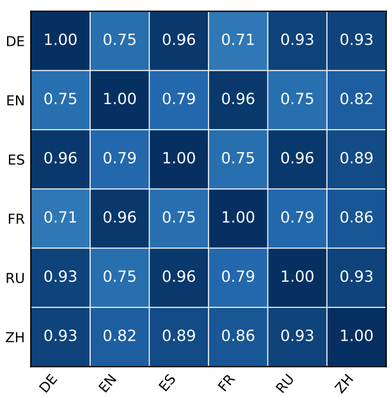


JRC Definitions | Pearson
7 models per correlation



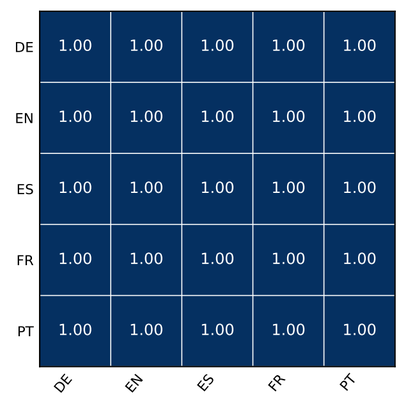


Chemical Patents | Spearman
7 models per correlation



JRC Articles | Spearman
7 models per correlation

JRC Definitions | Spearman
7 models per correlation



Each language pair is correlated across the same selected models. First average partner directions within model/prompt, then average both prompts equally; no mixing metric scales or datasets.
General scores are shared; terminology uses Luna LLM-enriched annotations. All models and both prompts are required for each retained direction.
Partner sets may differ between languages. NA = constant or fewer than 3 observations. Small, dependent cohorts; row identities unverified; descriptive, not causal or significance evidence.
